

# Whitepaper NUMISVR (NUVR)

## 1. Vision

NumisVR aims to transform the global numismatic market—an industry generating over \$10 billion in annual revenue—by making it more accessible, transparent, and secure through blockchain technology.

## 2. The Challenge

The traditional collectible coin market is renowned for its opacity and high barriers to entry. By using blockchain technology, we tokenize these coins to facilitate their accessibility. The goal here is to democratize access to and the use of collectible items.

## 3. Solution

NumisVR uses SPL / Solana standards to create a NUVR utility token exclusively intended to provide access to digital functions on our immersive platform: virtual navigation, 3D museum, and services associated with the numismatic collection. NUVR is not a share, nor a debt, nor a collective investment product.

## 4. How It Works

The platform allows the exchange and sale of tokens granting rights to digital experiences. The authentication of the coins is guaranteed, but holding NUVR grants neither ownership rights nor rights over the management of the underlying collectible coins. The NFTs created subsequently will have this specific function.

## 5. Technical Specifications, Value Creation, and Network Utility

NUVR is a utility token designed to serve as the primary access key to our digital services (marketplace, virtual museum, exclusive content, gamification, and advanced features).

### **Value Creation and Network Utility:**

The NUVR token is not a title of ownership, but the exclusive vector for settlement and access within the NumisVR ecosystem. Its economic value is based on a circular utility model: the obligation to use NUVR for the acquisition of fractionated NFTs, settlement of network fees, and unlocking premium services (such as certified expertises, on-chain insurance, and high-fidelity 3D modeling) creates a direct correlation between the growth in the platform's transaction volume and the organic demand as well as the velocity of the token.

---

*Reinforced warning on speculation: Any acquisition of the NUVR token is solely for utility purposes within the ecosystem.*

## 6. Security

Smart contract audits guarantee the absence of vulnerabilities. The physical storage of the collectible coins is located in Switzerland to guarantee the exclusivity of the digital exhibitions.

## 7. Risks and MICA / Howey Declaration

NUVR may lose all its value, is not guaranteed, and cannot be assimilated to a transferable security or a financial asset. There is no compensation or protection of the invested capital. A 14-day withdrawal clause for individuals applies in accordance with the MICA regulation.

## 8. Our Operations: The Platform

**Objective:** To allow the exchange, purchase, and sale of tokens corresponding to numismatic collectible coins on a decentralized and secure platform.

**Fractionalization via Master NFT and Vault:** Each numismatic coin is represented by a Master NFT that embodies 100% of the digital ownership of the asset. This Master NFT can be in one of the following two states:

- **State A - Free Master:** The NFT is uniquely transferable; no fractions exist.
- **State B - Locked Master:** The NFT is deposited in the Vault (smart contract), which then issues a fixed and immutable number of SPL / Solana fractions representing the same coin.

A strict technical invariant guarantees that at any given time, only one of these situations is possible:

- If the Master NFT is owned in full by someone, then no fraction of that coin exists on the market.
- If fractions of the coin are in circulation on the market, then the Master NFT is mandatorily locked and secured in the digital vault.

De-fractionalization (redeem) is possible when an investor gathers 100% of the fractions; they can burn them to release the Master NFT, which is then returned to them. This mechanism prevents any double representation of the same coin and offers complete on-chain traceability.

Metadata (photos, certificates, hashes of potential legal documents) are stored via IPFS/Arweave and frozen after issuance to guarantee their immutability.

The governance of the system relies on:

- A multi-sig for administrative roles.
- An immutable cap of fractions per coin.
- A pause mode in case of an incident.
- Detailed on-chain events for audit and transparency.

This model offers a clear, secure, and verifiable tokenization mechanism: it establishes a direct correspondence between a physical coin and its digital representation, while allowing liquidity through fractionalization.

## 9. Platform Development Steps

### 1. Conception & Architecture:

- **Define UX/UI:** Development of ergonomics (navigation, detailed coin sheets, wallet management, transaction tracking, filters by era, country, rarity, etc.).
- **Security:** Implementation of advanced protocols for the protection of transactions and user data (encryption, strong authentication, access management).
- **Interoperability:** Plan compatibility with common crypto wallets and the integration of token standards (SPL / Solana).

### 2. Technical Development:

- **Back-end development:** Programming market logic, managing offers/auctions, payment engine, alert/preference system.
- **Front-end development:** Creating interactive pages for navigation, deposits/withdrawals, presentation of tokenized coins.
- **KYC/AML Integration:** Addition of identity verification and anti-money laundering modules to ensure compliance.

### 3. Securitization & Testing:

- **Security audit:** Execution of external audits of the marketplace and its smart contracts by leading Web3 security firms.
- **Closed beta test:** Opening to a restricted group of collectors and investors for stress tests and user experience feedback.
- **Bug fixing:** Factoring in feedback to correct potential malfunctions or flaws.

### 4. Deployment & Communication:

- **Official opening to the public:** Announcement on all official channels, user guides, and dedicated customer support at launch.
- **Incentive program:** Implementation of discounts, rewards, or advantages for early registrants and sellers.
- **Transparent dashboard:** Real-time publication of trading volumes and updates.

### 5. Monitoring & Continuous Improvement:

- **Feedback collection:** Implementation of forms and live sessions to gather user suggestions.
- **Regular updates:** Deployment of new features in response to market needs (auctions, bulk sales, special categories, etc.).
- **Strengthening compliance:** Regulatory monitoring and continuous adaptation of procedures.

## 10. Tokenomics and Vesting

The NUMISVR token presents the following specifications: SPL / Solana Standard. The choice of the SPL / Solana standard proves strategic for several reasons: interoperability (compatibility with all wallets and platforms supporting Solana), increased liquidity, and proven security.

- **Total Supply:** 1 Billion.
- **Public Price:** \$0.06.
- **Global Token Allocation:**
- Marketing: 280 Million (28%)
- Initial Part. (Early Investors): 200 Million (20%)
- Team: 150 Million (15%)
- Eco. Rewards (Ecosystem Rewards): 100 Million (10%)
- Coin Acqui. (Coin Acquisition): 100 Million (10%)
- Treasury: 100 Million (10%)
- Public Sell: 50 Million (5%)
- Advisors: 20 Million (2%)

*(Note: Vesting and distribution schedules follow the detailed table ranging from Month 1 to Month 36 to ensure a progressive and controlled release of the supply).*

#### **Key Vesting Phases:**

- **Phase 1 (Months 1 to 3):** Initial launch. Total release of the 50M from the Public Sell. Start of Treasury allocations and Coin Acquisitions.
- **Phase 2 (Months 4 to 17):** Development. Start of the unlock for Advisors, Marketing, and Rewards. Start of distribution to early investors in Month 7.
- **Phase 3 (Months 18 to 36):** Full distribution. Start of the unlock for the Team. All categories reach their total cap at the end of the 36th month.

## **11. Roadmap & Milestones**

- **Phase 1: Foundations (Q3 2025)**
- Launch of the official website presenting the team, vision, and roadmap.
- Creation of graphic identity and project branding.
- Community animation on X (Twitter), Telegram, and Discord.
- Publication of the Whitepaper and detailed technical documentation.
- **Phase 2: Presale (Seeds & Early Access) (Q1-Q4 2026)**
- Deployment of the seed presale reserved for specialized enterprises and Web3 funds.
- Recruitment of influential ambassadors in the numismatic field.
- Forming solid collaborations with experts and recognized numismatic institutions.
- **Phase 3: ICO Launch (Q2 2026 - Q4 2026)**
- Official launch of the public presale of the \$NUVR token at the price of \$0.02 (payable in USDT on Solana) for the first tier of 8 million tokens.
- Dynamic price evolution based on global purchase volume.
- Light KYC process tailored strictly to utility tokens regulatory compliance.

- **Phase 4: Ecosystem Expansion (Q4 2026 - Q1 2027)**
- **Official TGE (Token Generation Event) date: December 1, 2026.** *(If all allocated tokens are sold prior, the TGE date will be advanced accordingly).*
- Deployment of the marketplace for tokenized numismatic coins.
- Listing procedures on major centralized (CEX) and decentralized (DEX) exchanges.
- Creation of a dedicated company based in Geneva, with administrative and operational offices located directly within the Geneva Freeport premises.
- **Phase 5: Consolidation & New Services (Q1 2027 - Q3 2027)**
- Development and issuance of NFTs compatible with Virtual Reality (VR) headsets and glasses.
- Creation of an immersive virtual museum complete with thematic rooms and interactive visits.
- Continuous evolution of the Roadmap based on direct user feedback and in-depth market analyses.

## 12. Advisors

Our project relies on a strategic network of recognized advisors in the fields of numismatics, blockchain, finance, and regulation.

## 13. Security and Audit

- **Smart Contract Audit:** Our smart contracts are audited by leading and internationally recognized Web3 security firms.
- **Storage of coins:** Thanks to Switzerland's neutrality, the coins stored in the Geneva Freeports and Warehouses are protected against risks of bankruptcy or seizure.
- **Renewed audits of coins:** A numismatic expert is mandated for each renewed period to proceed with the re-evaluation of the complete collection.

## 14. The Future

Create your own universal museum. Our NFTs are fully compatible with virtual reality applications.

## 15. Legal Structure of NUMISVR Before and After the ICO

NUMISVR operates via a calculated two-step legal strategy:

- **Before and during the ICO (Fundraising phase):**
- **Company Name:** Numisvr-ico limited
- **Company Number:** 2183122
- **Registered Address:** Quijano Chambers, P.O. box 3159, Road Town, Tortola, British Virgin Islands
- **After the ICO (Operational phase - Dual structure):**
- **Layer 1 (Digital):** Creation of a legal entity in Estonia with a financial license (VASP).

- **Layer 2 (Physical):** Creation of a legal entity in Switzerland to manage the secure vault in the Geneva Freeport.

- 

## **16. Disclaimer**

The purchase or holding of NUVR is speculative by nature and carries the risk of total loss. No part of this whitepaper constitutes financial, legal, or tax advice. Buyers may withdraw within 14 calendar days in accordance with the applicable rules of the MICA regulation.
